

PREPARED FOR FUJIFILM

The operating system for the print network.

Four AI-powered platforms, built in under seven months, that quote, produce, sell and market print – for franchise networks, independents and the vendors who equip them.

Advantage MIS

Advantage AI

Raring2go!

DPS Sales Intelligence

Every press is only as productive as the software around it.

Print businesses run on quotes, artwork, imposition, scheduling, proofs and invoices, and most stitch that together by hand. We built the connected layer, and the AI on top of it, so every press sits inside a faster, more profitable business.

Advantage MIS

IN FIELD PILOT NOW

FUJIFILM FLOW API • JAN 2027

Being piloted in the field today: the management platform for print centres and independent print shops: instant multi-mode quoting, 14-stage job control, prepress, web-to-print, EPOS, CRM and finance. Ships with a verified Fujifilm Revoria & ApeosPro press catalogue.

678 data models • 1,077 API endpoints • 344 screens

Advantage AI & the Franchise Platform

BUILT

A multi-tenant franchise operating system with a streaming AI assistant, franchise coach, lead scoring, workflow builder and metered AI billing. Proven pattern for running hundreds of locations from one brain.

754 data models • 3,690 routes • 1,135 templates • 93 scheduled automations

Raring2go! Business-in-a-Box

IN BUILD • DUE Q2 2027

The franchise and publishing OS for a network of 80+ territories: one login per franchisee, one territory edition driving print-ready PDF and digital magazine, advertiser sales, native email, royalties and AI agents in one system. Foundations, edition pipeline, newsletters and job engine are already built.

Today: 140 tables • 19 packages • in internal UAT

DPS Sales Intelligence Cloud

BUILT

An AI CRM and field-sales engine for print-technology suppliers: UK-wide prospecting, equipment-lifecycle "buy windows", lease and ROI quoting, call recording and coaching, and a customer deal room.

162 tables • 609 API routes • 116 test files

~~5 days~~ → **15 min**

In the field today: 37 pilot centres have cut enquiry-to-quote from a 5-day average to 15 minutes. 95% of AI quotes are accepted unedited, and users rate Advantage **9 / 10**.

WHY IT MATTERS TO FUJIFILM – AND TO EVERY PRESS BRAND

One integration surface, many customers. Connect a Fujifilm device once to the platform and every centre on it – franchise or independent – can quote, schedule and sell against that device with real speeds, real click costs and real capacity.

THE MARKET

A very large industry, getting leaner every year.

Print is shrinking in the number of firms, not in importance. Fewer, leaner businesses must quote faster and waste less. That is exactly where an AI-driven platform earns its place – and it works for any press, not only Fujifilm's.

What a small share means

UK COMPANIES ON THE PLATFORM	SHARE OF ~7,200 UK PRINT COMPANIES	ANNUAL SUBSCRIPTION REVENUE AT £399 A MONTH
72	1%	£344,736
360	5%	£1,723,680
720	10%	£3,447,360

Advantage MIS list price £399 per month (£4,788 a year). Subscription only, UK only, using BPIF's company count; excludes payments, AI usage, the franchise platform and Raring2go!.

Fujifilm-first, not Fujifilm-only. Machine profiles are data, so any press brand can be added. Fujifilm gets first-class integration and the Flow API link in January 2027; every other centre on the platform still benefits from the quoting, job and AI engines.

Sources: BPIF "UK Printing Facts & Figures" (2023 edition, 2022 data); First Research US commercial printing profile; Grand View Research, Straits Research, Precedence Research, IBISWorld (global commercial printing, 2025); Fortune Business Insights, The Business Research Company (print management software, 2025); Wiseguy Reports, Market Research Intellect (print estimating software). Market-research figures vary by definition and are third-party estimates.

Advantage in the field: the scorecard.

Advantage MIS is live in a field pilot today. Live in 37 centres since June 2026, with the platform recording the evidence as a by-product of normal work.

95%

Jobs through the stage
engine

TBC

Rework rate

TBC

Why these numbers can be trusted

- Every quote is **snapshotted** and can be re-casted
- Job stage changes are **timestamped** by the state machine
- AI confidence is stored per quote, and low confidence routes to review
- Rework post-mortems and trends are captured per job

In the pilot customers' words

Quote from a pilot centre – name, centre, role

What changed first

What they would not give back

What the pilot is proving for Fujifilm

1 • Costing is right

95% of AI quotes are accepted without editing, on each centre's own click rates.

2 • Staff will use it

Quote-to-cash flows through one system with little re-keying.

3 • The data is rich

Utilisation and job mix are clean enough to feed Flow from January 2027.

Every quote is a forecast of clicks and consumables.

Advantage costs each job to the click on a named press. So before a job runs, the platform already knows the clicks, stock and finishing it will use. Aggregated and opt-in, that is a demand signal Fujifilm has never had at centre level.

A real usage signal

Utilisation by press model, job mix by stock and size, click volumes and rework rates – by centre, by region, by month. Today that picture comes from sell-in; this adds sell-through.

Consumables pull-through

The right consumables at the right time, with fewer stock-outs mid-job. Counters and usage can trigger reorder and service conversations automatically.

Smarter upgrades

Capacity data shows which centres are outgrowing a press. Paired with the DPS refresh-window engine, that becomes a timed, targeted upgrade conversation.

THE DEMAND SIGNAL, IN ONE LINE

Installed presses × utilisation × clicks per hour = a live consumables forecast

Fujifilm supplies the installed base; the platform supplies utilisation and job mix from the centres on it.

What centres get in return

- Quotes costed on their own click rates
- No stock-outs halfway through a job
- Capacity and rework insight they can act on

Privacy by design

- Centre-owned data; the feed is opt-in
- Aggregated by default, never customer artwork or prices
- Consent history and audit already in the platform

Steps 1–4 are built today in Advantage MIS. The opt-in usage feed is proposed and depends on API access to Fujifilm's Flow software (due January 2027).

Where Fujifilm accelerates it.

The platforms exist. The next phase is putting them on real presses, in real centres, with real data – and Fujifilm is the partner who can make that happen at scale.

NOW

Advantage in the field

Live pilot of Advantage MIS, Fujifilm press catalogue seeded, Raring2go! in internal UAT, security audit remediated.

JANUARY 2027

Fujifilm Flow API access

The network integration: API access to Fujifilm's Flow software connects Advantage jobs and workflows to the press floor, with JDF/JMF connectors already in the codebase.

Q1 2027

Advantage Coworker

Six upgrades roll out: one coworker across platforms, governed autonomy, proactive briefings, print playbooks, enquiry-to-invoice in one chat.

Q2 2027

Raring2go! Business-in-a-Box launches

After its first real-territory proof point: Edition Factory, native email, finance and royalties, AI agents.

WITH FUJIFILM

Print engine for Raring2go!

Rendered PDF/X output, colour management and imposition so territory editions flow straight to a Revoria press.

WITH FUJIFILM

Dealer & direct sales engine

DPS-style prospecting and refresh-window alerts configured for Fujifilm equipment, with AI call coaching and customer deal rooms.

The partnership in one line

Fujifilm brings the presses and the reach. We bring the software that makes every press-owner more productive – and a reason for them to stay on Fujifilm.
