

PREPARED FOR FUJIFILM

The operating system for the print network.

Four AI-powered platforms, built in under seven months, that quote, produce, sell and market print – for franchise networks, independents and the vendors who equip them.

Advantage MIS

Advantage AI

Raring2go!

DPS Sales Intelligence

Every press is only as productive as the software around it.

Print businesses run on quotes, artwork, imposition, scheduling, proofs, invoices and sales calls. Most still stitch that together by hand. We built the connected layer – and the AI on top of it – so that every Fujifilm device in the field sits inside a smarter, faster, more profitable business.

Advantage MIS

IN FIELD PILOT NOW

FUJIFILM FLOW API • JAN 2028

Being piloted in the field today: the management platform for print centres and independent print shops: instant multi-mode quoting, 14-stage job control, prepress, web-to-print, EPOS, CRM and finance. Ships with a verified Fujifilm Revoria & ApeosPro press catalogue.

678 data models • 1,077 API endpoints • 344 screens

Advantage AI & the Franchise Platform

BUILT

A multi-tenant franchise operating system with a streaming AI assistant, franchise coach, lead scoring, workflow builder and metered AI billing. Proven pattern for running hundreds of locations from one brain.

754 data models • 3,690 routes • 1,135 templates • 93 scheduled automations

Raring2go! Business-in-a-Box

IN BUILD • DUE Q2 2027

The franchise and publishing OS for a network of 80+ territories: one login per franchisee, one territory edition driving print-ready PDF and digital magazine, advertiser sales, native email, royalties and AI agents in one system. Foundations, edition pipeline, newsletters and job engine are already built.

Today: 140 tables • 19 packages • in internal UAT

DPS Sales Intelligence Cloud

BUILT

An AI CRM and field-sales engine for print-technology suppliers: UK-wide prospecting, equipment-lifecycle “buy windows”, lease and ROI quoting, call recording and coaching, and a customer deal room.

162 tables • 609 API routes • 116 test files

WHY IT MATTERS TO FUJIFILM

One integration surface, many customers. Connect a Fujifilm device once to the platform and every centre on it – franchise or independent – can quote, schedule and sell against that device with real speeds, real click costs and real capacity.

Four platforms. Under seven months.

Counted directly from the four code repositories on 8 October 2026 – no estimates, no projections.

1.3M

lines of production & test code across four platforms

1,734

data models & tables powering quoting, jobs, CRM, finance, publishing and AI

5,000+

API endpoints and routes – every one with server-side authorisation rules

8,000+

automated tests written across the suite, plus CI guards that fail the build on unprotected routes

3,200+

commits since March 2026 – continuous, audited delivery

100+

automated background jobs & scheduled workflows: 93 scheduled tasks in the franchise platform and 16 cron jobs in Advantage

WHERE THE CODE LIVES

Method: line counts exclude dependencies; DPS figure may include generated API-client code. Test figure is the sum of test functions and recorded passing tests per repository (Advantage: 2,435 passing at the 6 Oct 2026 audit). Commit span 17 March - 8 October 2026.

Already speaking your **press language.**

Advantage ships with a hand-verified machine catalogue transcribed from manufacturer specifications – and Fujifilm is the default manufacturer when a centre sets up its machine rates.

RATED ENGINE SPEEDS

3,900-6,000

pages per hour, per profile – drives live time-and-cost calculations

3-TIER SPEC LOOKUP

- 1 • **Verified catalogue** – 100% confidence
- 2 • **Datasheet extraction** – PDF or URL, per-field confidence
- 3 • **AI recall** – hard-capped at 60%

What happens when a Fujifilm press is on the network

Costed to the click

Each centre enters its own click rate, setup and speed. Quotes use real machine economics – never a guess, never a client-supplied cost.

Matched to the job

Press-compatibility and capacity logic checks stock, size and finishing against machine capability before a job is promised.

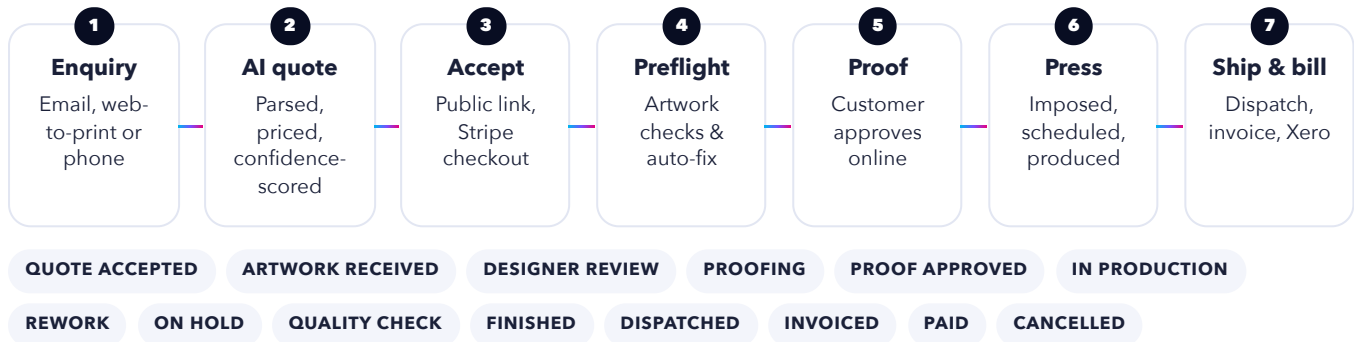

Imposed & optimised

A 1,000-line imposition engine, sheet optimiser, cut-and-stack and creep calculator keep waste down and sheets full.

Fujifilm, Revoria and ApeosPro are trademarks of their respective owners. Catalogue content is an independent transcription of published specifications; API access to Fujifilm's Flow software is due in January 2028, and that is when the live connection to the presses arrives.

From enquiry to dispatched – without re-keying a thing.

One connected record follows the job from the first email to the final invoice. Every hand-off that used to be a phone call, spreadsheet or sticky note is a rule in the system.

14-stage job state machine · transitions validated · overrides role-gated

A pricing engine print people trust

- **Five production modes** costed server-side: digital sheet, large format, litho, signage, packaging
- Paper & parent-sheet utilisation, spoilage, click cost, setup, finishing, labour, delivery, turnaround, target margin and VAT
- Litho plates, make-ready, ink and wash-up
- Quantity ladders from 50 to 10,000 re-imposed live beside the price
- Missing cost data **flags the quote for review** – it never silently prices at zero
- Every price is snapshotted and can be re-costed

The whole print business, one login

- Customer portal: orders, reorder, bulk order, approvals, invoices
- Per-centre web-to-print storefronts with custom domains
- EPOS till, inventory, suppliers, outsourcing marketplace
- Prepress: preflight, ICC, print marks, JDF/JMF and Enfocus Switch connectors
- Stripe Connect & Terminal; Xero, Sage and QuickBooks sync
- Shippo shipping, sustainability certificates, variable data

**Jan
2028**

Network integration: Fujifilm Flow API access. Advantage is in the field today as a live pilot. API access to Fujifilm's Flow software, due January 2028, connects job and workflow data end to end – with Fujifilm presses already first-class machine profiles.

AI in every workflow. Not bolted on – built in.

Across the four platforms, AI prepares, predicts and drafts – so people spend their day deciding and selling instead of typing and chasing.

ADVANTAGE MIS · PRINT OPERATIONS

Run the shop floor faster

- ✦ **Email-to-quote:** reads an enquiry, builds the spec, prices it and scores its own confidence
- ✦ **Copilot:** intent engine, action executor, proactive nudges, anomaly detection, forecasting and metric explainer
- ✦ **Artwork & image-quality checks** and design critique
- ✦ **Machine-spec lookup** with confidence tiers
- ✦ Upsell suggestions inside the quote, natural-language search, voice job intent, quote learning

ADVANTAGE AI · FRANCHISE PLATFORM

Coach the whole network

- ✦ **AdvantageAi assistant:** streaming chat with memory, function calling and a notepad
- ✦ **Franchise Coach** and AI Intelligence Hub with lead scoring
- ✦ **Workflow Builder:** analyses data and proposes automations
- ✦ Curriculum assistant, reports assistant, AI email and content drafting, multilingual translation
- ✦ **Metered AI:** every call logged, costed, with budget caps per organisation, franchise and user

DPS SALES INTELLIGENCE · EQUIPMENT SALES

Sell more kit, smarter

- ✦ **Lead & opportunity scoring**, next-best-action engine and predictive intelligence
- ✦ **Call recording** → **transcript** → **coaching** with whisper/barge/monitor
- ✦ **AI Deal Room** and assistant for customers
- ✦ Outreach drafts, forecast digests and industry-news relevance
- ✦ ML platform with vector embeddings for similarity and prediction

RARING2GO! · PUBLISHING & MARKETING

Create, always with approval

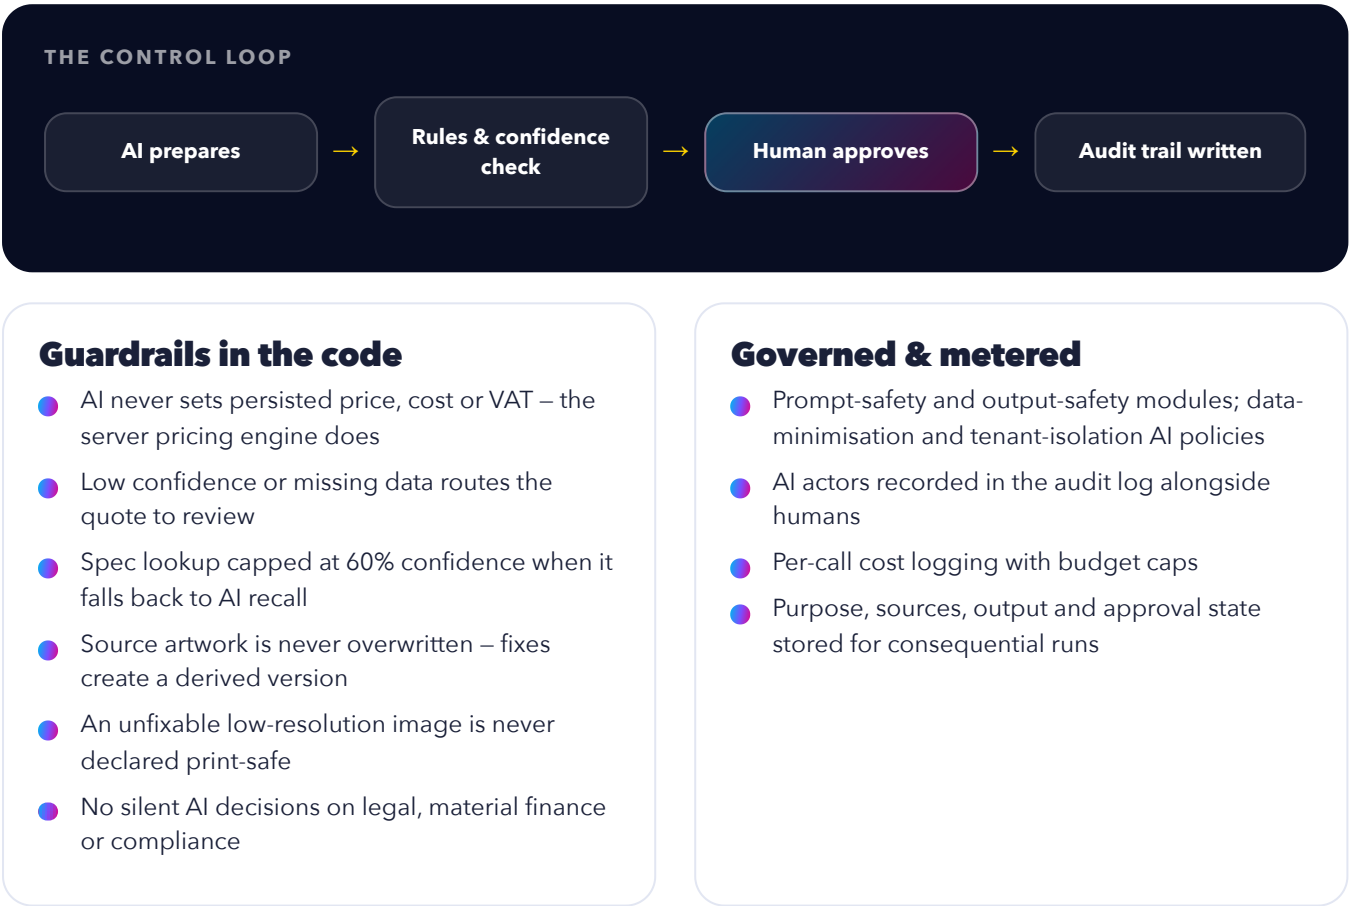

- ✦ **AI gateway** with versioned prompts and usage tracking
- ✦ Subject-line, content and full-campaign suggestions for newsletters
- ✦ Suggest-only by design: public content follows configured approval policy
- ✦ Roadmap: content creation, events finding and cross-channel repurposing through the same gateway

Model-agnostic

OpenAI GPT, Whisper and embeddings in Advantage, the franchise platform and DPS; Anthropic Claude through the Raring2go! gateway. Providers sit behind adapters, and every AI feature falls back to a deterministic mode when no key is configured.

AI that proposes. People who decide.

The fastest way to lose a print customer is a wrong price or a wrong proof. The suite is designed so AI accelerates the work and a human – or a hard rule – owns the outcome.

Where the efficiency comes from

MANUAL TODAY	IN THE SUITE	SOURCE IN CODE
Re-typing enquiries into a quote	Email parsed and priced automatically, confidence-scored	ai-auto-quote, quote-parser
Calculating imposition & waste by hand	Optimised sheets, cut-and-stack, creep, per-quantity re-imposition	imposition-engine, sheet-optimizer
Chasing proofs & approvals	Online proof approval; job auto-advances on approval	14-stage job state machine
Month-end invoice & royalty admin	Scheduled invoicing, dunning, reconciliation, royalty statements	93 scheduled jobs, Xero sync
Cold-calling blind	Scored leads, buy-window alerts, AI call coaching	DPS next-best-action

We deliberately quote no “percent time saved” figures: pilot measurements begin with the first live centres.

From software you operate to a coworker that operates it.

2026 has proved the model: AI that lives where teams already work and finishes tasks, not just answers questions. The market leader is a generalist. We are building the print-industry specialist – with the governance enterprises demand.

\$75M
Series A raised by Viktor, the AI-coworker category leader, led by Accel (reported, May 2026)

3 months
from public launch to a reported \$15M annualised run rate

3,200+
tools connected – proof that buyers want one agent across many systems

Source: Fortune and Viktor's own site, May-Oct 2026. Third-party figures are company-reported.

Generalist coworker vs Advantage Coworker

	GENERALIST AI COWORKER	ADVANTAGE COWORKER
Domain	Any team, any tool	Print-native: costed quoting, imposition, preflight, press profiles, job stages
Access control	Workspace-level and shared; role-based access is on its roadmap	Acts as the signed-in user; module + action + scope permissions and territory isolation already built
Approvals	Confirmation on high-stakes actions	Configurable approval tiers; AI never sets price, cost or VAT
Audit	Not described	AI recorded as an actor alongside humans in the audit log
Memory	Reported as not inspectable or exportable	Playbooks you can read, edit and export
Models	Own models only	Provider adapters; OpenAI and Anthropic already wired
Surfaces	Slack and Teams	In-app, Slack/Teams, WhatsApp, email – and the press floor

Comparison reflects public descriptions of a leading AI-coworker product (viktor.com, Vellum, Oct 2026) and may change as it ships its roadmap.

The story in one line: general-purpose coworkers prove people will hire an AI. Print businesses need one that already knows what a click cost, a bleed and a Revoria press are – and can be trusted with a customer's money.

Introducing the Advantage Coworker.

One AI colleague across all four platforms: it briefs you each morning, does the work you ask for, and asks before anything consequential. **Proposed plan – working name.**

WHAT IT FEELS LIKE (ILLUSTRATIVE)

Quote 500 A5 leaflets, 170gsm silk, 4/4, delivered Friday.

Draft quote ready. Costed on your centre's press profile and imposed 4-up. **Flagged for review:** no finishing rate set for trimming. Send for approval?

Add the rate, then send.

Done – sent to the customer. I'll chase artwork on Wednesday and book the press slot when they approve the proof.

GUARDRAILS, BY DESIGN

- Acts with the **user's own permissions**, never more
- Approval tiers:** drafts free, sends and spends confirmed
- Pricing stays in the engine** – the AI can't invent a number
- Every action audited**, with the AI named as actor
- Territory and tenant isolation** hold for the agent too

Six upgrades, January to March 2027

WHEN	UPGRADE	BUILDS ON WHAT EXISTS TODAY
Jan	1 • One Coworker, every platform In-app, Slack/Teams, WhatsApp	AdvantageAi assistant (memory, function calling), Advantage Copilot action registry, Raring2go! AI gateway, Twilio
Jan	2 • Governed autonomy Permission-scoped, approval tiers	Editable RBAC, audit with AI actor type, prompt- and output-safety modules, AI budget caps
Feb	3 • Proactive daily briefing "My Today" for every role	93 scheduled jobs, Copilot nudges and anomaly detection, next-best-action engine
Feb	4 • Print playbooks (skills) Readable, editable, exportable	Knowledge base, SOP library, quote-learning and rework post-mortems
Mar	5 • Enquiry-to-invoice in one chat Quote → proof → press → bill	Email-to-quote, 14-stage job engine, Stripe, Xero/Sage/QuickBooks sync
Mar	6 • Raring2go! agents & Flow-ready design Content, events, artwork; Fujifilm Flow integration design	Territory-edition workflow, preflight, job runtime; JDF/JMF and machine-profile layer

Q1 2027

Lands while **Advantage is in its field pilot** and alongside the **Raring2go! first proof point**, ahead of the **Q2 2027 Business-in-a-Box launch** – so the Coworker learns from live centres, real quotes and a real territory edition.

Print production & print sales – both connected.

Raring2go! – one edition, print and digital

IN BUILD · INTERNAL UAT

Seasonal master edition

Territory edition

Preflight gate

Print + digital outputs

- One authoritative record feeds both outputs from the same page snapshot
- HQ template changes flow to territories without overwriting local overrides
- Published template versions are immutable – change = new version
- Templates carry trim, bleed, margins, grid and print rules (CMYK, 300 dpi, bleed required)
- Print output blocked until every page passes preflight and approvals
- Advertiser booking reserves real page slots – no overselling
- Newsletters, social queue, royalties and finance in the same platform
- Durable, idempotent job runtime with retries and a visible job console

Fujifilm fit: the preflight gate and print spec are in place; a rendered PDF/X engine and device connector are the natural joint build.

DPS Sales Intelligence – equipment sales on autopilot

BUILT

~5M

UK companies in the Companies House register for prospecting, with print-sector SIC targeting

52+12

screens across the sales app and the customer portal

162

tables incl. installations, lease presets, quote terms and “buy-window” tracking

- **Territory map & digital twin** scenario modelling, route planner and geo check-in diary
- **Equipment lifecycle:** installations, lease/ROI/commission/margin quoting, refresh timing
- **Power dialler** with screen-pop, recording, transcription and live coaching
- **Integrations:** Microsoft 365, Google, Xero, Twilio, RingCentral, ERP and service-management adapters

Fujifilm fit: a ready-made dealer and direct-sales engine for equipment refresh cycles.

One login. One picture. 80+ editions on autopilot.

Where the platform is heading, per the product architecture: a franchisee runs a whole territory from one prioritised action list, and Head Office runs the network by exception – not spreadsheets and inboxes. **Target state – due Q2 2027.**

Franchisee

My Today, Territory Dashboard, Edition Studio, Audience CRM, finance and royalty statements.

Head Office

Network Command Centre, Edition Control Room, template library, health score and benchmarks.

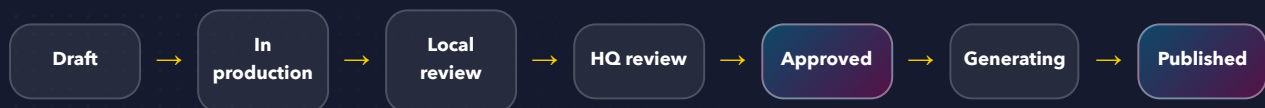

Advertiser

Own portal: book, upload artwork, approve proofs, pay invoices, see performance, renew.

Parent

Local content, events, offers, saved items, competitions and consent-controlled subscriptions.

THE EDITION FACTORY – ONE RECORD, TWO OUTPUTS

- HQ publishes locked brand templates with editable local zones
- HQ corrections flow to every territory without erasing local overrides
- 80+ editions managed by readiness and exception, with bulk actions

- Final preflight, approval, then review and **press-ready PDF** archived
- Digital magazine built from the same page IDs – no rebuild
- Retry-safe jobs with visible status on every output

SIX AI AGENTS, ALWAYS INSIDE THE JOB BEING DONE

Content agent

Draft, localise, headline, copy-fit, proofread and repurpose across print, web, email and social.

Events agent

Finds family events by territory and date, dedupes, validates and queues for approval.

Sales agent

Prospect summaries, next-best action, outreach drafts, package suggestions, renewal risk.

Artwork assistant

Classifies files, explains preflight failures and proposes safe fixes as derived copies.

Finance assistant

Invoice matching, aged-debt priorities and royalty anomaly flags.

Franchise assistant

Onboarding guidance, agreement comparison, compliance summaries and health insights.

ALSO IN THE FULL BUILD

Franchise agreements with e-signature · Onboarding from signature to first edition · Insurance & compliance tracking · Advertiser invoicing, card/Direct Debit and reconciliation · Automated royalty statements · Native newsletter factory with territory variants · Business-in-a-Box scorecard and peer benchmarks

The road to an 80-territory print engine.

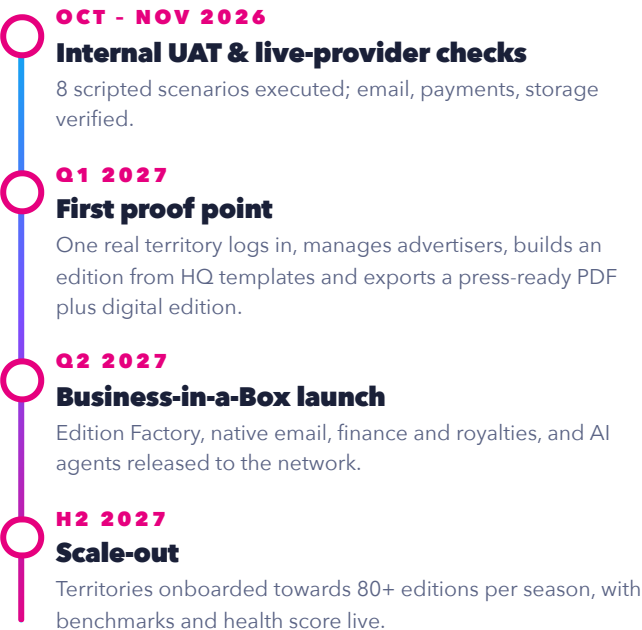

The end state: one login per franchisee, HQ running the network by exception, and every territory edition producing a press-ready PDF *and* a digital magazine from the same record – 80+ editions at a time.

THE 8-PHASE BUILD – STATUS IN THE CODE TODAY

0	Foundation: monorepo, design system, DB, audit, CI, jobs	BUILT
1	Identity & editable RBAC, role-aware shells	BUILT
2	Franchise + advertiser core, pipeline, billing	BUILT
3	Edition vertical slice: templates, flatplan, preflight, outputs	BUILT
4	Edition Factory at scale: inheritance, control room, bulk ops	PROVING
5	Audience, native email, Newsletter Studio	BUILT
6	Finance, royalties, benchmarks, health score	PARTIAL
7	AI: wire content & events GPTs, copilots, automation builder	NEXT

Status from repository review, 8 Oct 2026. “Built” = implemented and under internal UAT; live-provider checks (email, payments, storage, malware scan) not yet executed.

FORECAST PATH

What the end state means for a digital press fleet

ILLUSTRATIVE MODEL

SCENARIO	TERRITORIES	UNIQUE EDITIONS / YR	COPIES / YR	PAGE-SIDES / YR
Proof point	3	12	24,000	0.77M
Scale-up	25	100	200,000	6.4M
Full network	80	320	640,000	20.5M

Assumptions to be replaced with HQ actuals: 4 seasonal issues a year, 32 pages per edition, 2,000 copies per territory edition. Each territory edition is unique (local content, local advertisers) – 320 versioned short runs a year is exactly the variable, short-run work digital production presses are built for.

Secure and auditable by design.

Franchise networks hold customer, financial and child-related data. Security is built into the architecture, and we are transparent about what is done and what is next.

Tenant isolation

Tenant → centre → user hierarchy. Data-driven permissions (module + action + scope). A CI guard fails the build if any API route lacks an auth or scoping marker. Cross-tenant tests required for sensitive endpoints.

Identity & access

Role-based MFA, account lockout, bcrypt, passkeys, session revalidation, rate limiting, CSRF and strict security headers at the edge.

Audit & privacy

Append-only audit events with redacted payloads, GDPR export and erasure, consent history, PII encryption, soft delete and retention rules.

Safe files & webhooks

Private storage with signed URLs, ClamAV malware scanning that fails closed in production, upload magic-byte checks, signature-verified Stripe and Twilio webhooks.

Resilient operations

Idempotent financial, publication and email-send jobs; leases, retries and dead-letter handling; health endpoints; nightly backups in the franchise platform.

Modern stack

Next.js, React 19, TypeScript, Python, PostgreSQL on Neon, Vercel, Railway and Cloudflare R2 – provider adapters keep vendors swappable.

Independent review – and what comes next

An internal security audit of Advantage on 6 October 2026 identified and remediated issues including cross-tenant access on a set of routes and unauthenticated endpoints; the franchise platform has code-level security and penetration-style reviews on file. We are candid that we hold **no third-party certification yet**, and our priorities with investment are:

- Postgres row-level security as defence-in-depth behind application isolation
- External penetration test and ISO 27001 / SOC 2 certification path
- Live-provider verification, backup-restore rehearsal and alerting
- Browser end-to-end and accessibility suites across all four platforms

Integration-ready

Stripe

GoCardless

Xero

QuickBooks

Microsoft 365

Google Workspace

Twilio / WhatsApp

RingCentral

Shippo

Enfocus Switch

JDF / JMF

Where Fujifilm accelerates it.

The platforms exist. The next phase is putting them on real presses, in real centres, with real data – and Fujifilm is the partner who can make that happen at scale.

NOW

Advantage in the field

Live pilot of Advantage MIS, Fujifilm press catalogue seeded, Raring2go! in internal UAT, security audit remediated. Four platforms, 1.3M lines of code.

Q1 - Q2 2027

Coworker upgrades & Raring2go! launch

The Advantage Coworker rolls out in Q1; Raring2go! Business-in-a-Box launches in Q2 2027 after its first real-territory proof point.

JANUARY 2028

Fujifilm Flow API access

The network integration: API access to Fujifilm's Flow software connects Advantage jobs and workflows to the press floor, with JDF/JMF connectors already in the codebase.

WITH FUJIFILM

Print-engine for Raring2go!

Rendered PDF/X output, colour management and imposition so territory editions flow straight to a Revoria press.

WITH FUJIFILM

Dealer & direct sales engine

DPS-style prospecting and refresh-window alerts configured for Fujifilm equipment, with AI call coaching and customer deal rooms.

The partnership in one line

Fujifilm brings the presses and the reach. We bring the software that makes every press-owner more productive – and a reason for them to stay on Fujifilm.

Stuart Harley

Computer Xplorers Group
